## Plugin- Monitor

=====

```
# git clone https://github.com/Cacti/plugin_monitor.git
```

Cloning into 'plugin\_monitor'...

remote: Enumerating objects: 451, done.

remote: Counting objects: 100% (451/451), done.

remote: Compressing objects: 100% (260/260), done.

remote: Total 1684 (delta 407), reused 226 (delta 191), pack-reused 1233

Receiving objects: 100% (1684/1684), 4.27 MiB | 1.72 MiB/s, done.

Resolving deltas: 100% (1274/1274), done.

```
[root@cacti plugins]# mv plugin_monitor monitor
```

```
[root@cacti plugins]# ls -la
```

```
drwxr-xr-x      8   root      root      monitor
```

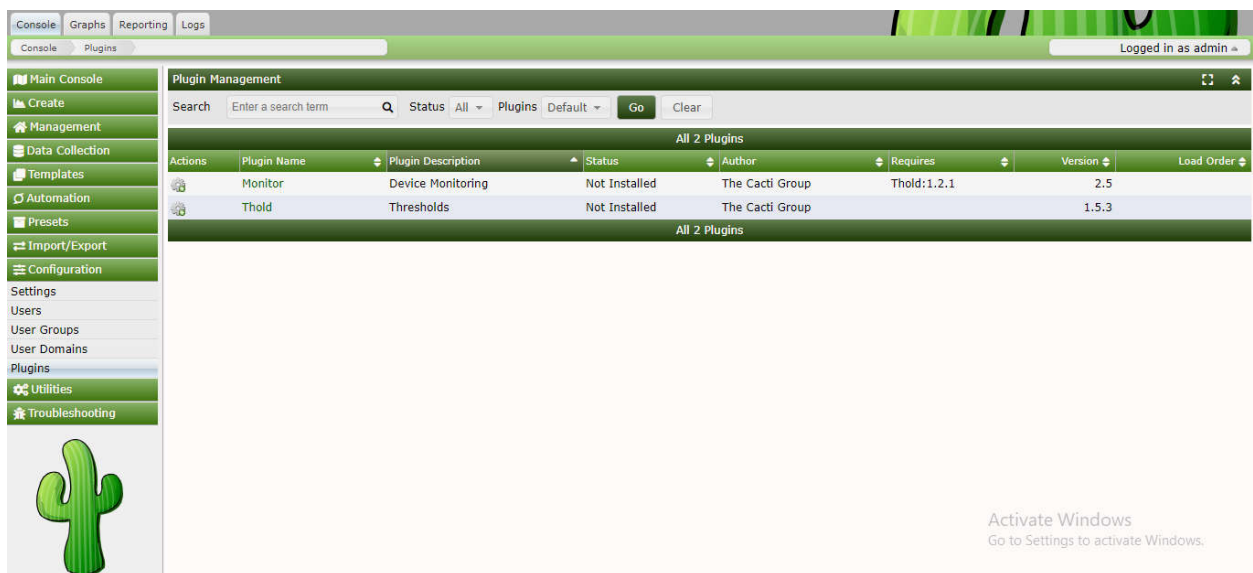

```
drwxr-xr-x     10  apache    apache    thold
```

```
# chown -R apache:apache monitor
```

```
# ls -la
```

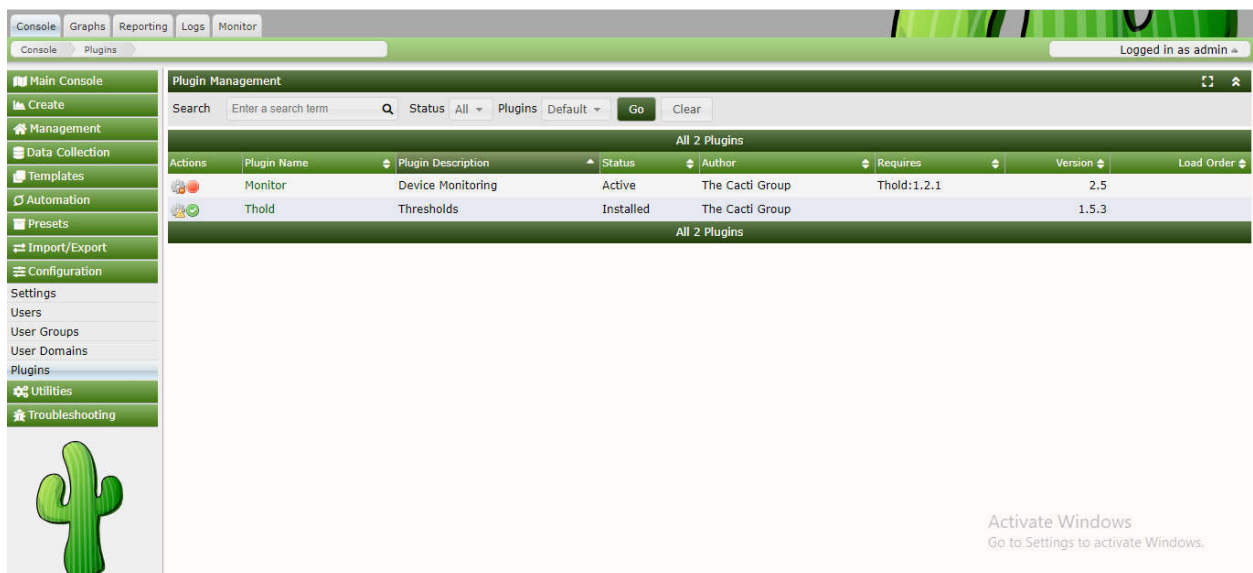

```
drwxr-xr-x      8   apache   apache    monitor
```

```
drwxr-xr-x     10  apache   apache    thold
```

The screenshot shows the Cacti web interface with the 'Plugin Management' page. The left sidebar contains navigation links: Main Console, Create, Management, Data Collection, Templates, Automation, Presets, Import/Export, Configuration, Settings, Users, User Groups, User Domains, Plugins, Utilities, and Troubleshooting. The main content area displays a table of installed and available plugins. The 'Monitor' and 'Thold' plugins are listed as 'Not Installed'.

Actions	Plugin Name	Plugin Description	Status	Author	Requires	Version	Load Order
	Monitor	Device Monitoring	Not Installed	The Cacti Group	Thold:1.2.1	2.5	
	Thold	Thresholds	Not Installed	The Cacti Group		1.5.3	

The screenshot shows the Cacti web interface with the 'Plugin Management' page. The 'Monitor' and 'Thold' plugins are now listed as 'Active' and 'Installed' respectively. The 'Monitor' plugin has a status of 'Active' and the 'Thold' plugin has a status of 'Installed'.

Actions	Plugin Name	Plugin Description	Status	Author	Requires	Version	Load Order
	Monitor	Device Monitoring	Active	The Cacti Group	Thold:1.2.1	2.5	
	Thold	Thresholds	Installed	The Cacti Group		1.5.3

## Welcome

Welcome to the PHP Weathermap 0.98a editor.

**NOTE:** This editor is not finished! There are many features of Weathermap that you will be missing out on if you choose to use the editor only. These include: curves, node offsets, font definitions, colour changing, per-node/per-link settings and image uploading. You CAN use the editor without damaging these features if you added them by hand, however.

Do you want to:

Create A New Map:

Named:

Note: filenames must contain no spaces and end in .conf

OR

Create A New Map as a copy of an existing map:

Named:  based on

OR

Open An Existing Map (looking in configs):

**simple.conf** - Simple Map

PHP Weathermap 0.98a Copyright © 2005-2019 Howard Jones - howie@thingy.com  
The current version should always be [available here](#), along with other related software.  
PHP Weathermap is licensed under the GNU Public License, version 2. See COPYING for details. This distribution also includes the Overlib library by Erik Bosrup.
